

Volunteers deliver 3D printed face shields to Bromley Park Care Home

Bromley Park Care Home has received a delivery of 70 face shields this week from Natasha and Ed Greig who are part of the 3D Crowd UK Volunteers group.

The couple have 3D printed the shields for the **Home** for use at this critical time during the pandemic. They join a growing number of volunteers across the world using their own 3D printers to produce protective wear for those who need it the most.

Huge thanks to Natasha and Ed for providing these invaluable pieces of PPE to our staff. They are much appreciated.

Details about the Prusa headset and the tests being done on it can be found at www.prusa3d.com/covid19/
